

Cloud Planning with HyperCloud™

Built-in intelligence to enable you to make the right cloud choices for your organization

Driven by the need to improve productivity and become agile, enterprises choose to move to the cloud. Migrating to the cloud without proper due diligence, or priorities in mind, make it hard for enterprises to get these projects right. Most migrations end up going over time and over budgets, casting a shadow on the business benefits that enterprises sought to achieve with the cloud. Most enterprises that have experienced failed migrations attribute these to poor or unrealistic planning.

Pre-migration Planning

Actual migrations can be performed with the assistance of purpose-built tools, though little to no guidance available for planning, the most crucial leg of these types of projects. Whatever the strategy enterprises choose to take to migrate their existing applications - re-hosting, re-platforming or refactoring, formulating an application strategy for the cloud involves technology choices, cloud provider choices at the very least.

HyperCloud™ helps enterprises navigate the complex, cloud ecosystem providing assistance in two key areas:

Migration Assessments: HyperCloud™ helps enterprises navigate the complex, cloud ecosystem, to help them build an assessment that is precise and accurate. It provides key insights and automation to expedite the planning phase through the different stages of sizing and capacity planning to cloud and instance recommendations, all based on current footprint and resource utilization. Enterprises can ensure a cost-efficient, low-risk migration.

Application Planning: HyperCloud™ translates application resource requirements running on-premises to cloud in detail, to ensure enterprises estimate their cloud costs accurately. Enterprises can optimize for multiple requirements such as performance, compliance to forecast cloud costs and narrow down on the best fit cloud provider and instance option for their modelled application.

Benefits

Simple and Efficient: Options that provide efficient paths to the cloud with minimal impact on user experience

Automated Insights : Cloud insights to empower enterprises to make the right choices based on existing footprint

High Confidence Migrations: Build a comprehensive plan to ensure a successful, low-risk migration

Optimized for Your App : Compare and contrast clouds, to always ensure the right and the best choice of cloud provider.

Migration Assessment

HyperCloud's migration assessment capability helps enterprises build an effective and actionable plan. It evaluates existing IT environments and aggregates resources in use to build a TCO estimate based on cloud preferences (cloud provider, instance choices etc). HyperCloud's migration assessment framework includes automation for the following four steps.

Application Planning

As enterprises look to pick the best of breed cloud providers, they can build a granular picture of their existing application landscape and map them to the cloud, or multiple clouds to help them choose. HyperCloud™ provides a detailed account of what their costs will look like in the cloud and optimize for business benefits they are looking for.
